

Sole Provider Attestation Letter

To Whom This May Concern,

On behalf of Les Solutions Innov2Learn Inc., I hereby certify that the **CO2-Detect (SKU: CO201)**, a **simulated colorimetric CO₂ detector**, developed and produced by our company, is, as of today and to the best of our knowledge, the sole simulator of its kind.

This tangible/true-feel device has been specifically designed to display a pretended reading on standardized patients (actors) and manikins (either animated/robotic or not). It mimics the function of a single-use colorimetric CO₂ detector by showing a color change that represents the presence or absence of exhaled carbon dioxide.

The **CO2-Detect** is Bluetooth remote-controlled, powered by a rechargeable battery, and requires operation through a mobile application available on the App Store and Google Play/Play Store, as well as through a web-based application on computers, electronic tablets, and mobile phones.

Yours Sincerely,

Mike Boutin, CEO at Innov2Learn
