

Sole Provider Attestation Letter

To Whom This May Concern,

On behalf of Les Solutions Innov2Learn Inc., I hereby certify that the **Rectal Probe (SKU: REC01)**, a simulated rectal probe accessory for the Thermo and Thermo+, developed and adapted by our company, is, as of today and to the best of our knowledge, the sole simulator accessory of its kind.

This tangible/true-feel probe is based on a real rectal probe that has been modified to allow use in simulation training. It has been specifically designed to simulate rectal temperature measurements on standardized patients (actors) and manikins (either animated/robotic or not).

The **Rectal Probe** does not contain a battery or electronics of its own. It functions only when connected to the Thermo or Thermo+, which are Bluetooth remote-controlled and operated through the Innov2Learn application available on the App Store, Google Play/Play Store, and as a web-based application on computers, electronic tablets, and mobile phones.

Yours Sincerely,

Mike Boutin, CEO at Innov2Learn
